

Lehigh Technologies Announces Price Increase Effective August 15, 2018

Tucker, GA. - July 25, 2018

[Lehigh Technologies](#), a specialty chemicals company that produces sustainable raw materials from end-of-life tires and post-industrial rubber, announced today that the PolyDyne™ and MicroDyne™ product lines of Micronized Rubber Powders (MRP) will be subject to a price increase effective Wednesday, August 15, 2018 in the United States, Asia-Pacific and South America.

Over the past two years, raw material and other input costs for the production of MRPs have increased significantly. The Company sees the cost pressures continuing and can no longer absorb the increases. The prices of the PolyDyne™ and MicroDyne™ MRP will be increased by an average of 12 percent.

Lehigh continues to invest in its manufacturing plants in the United States and, as recently announced, [in Europe](#), to ensure we can continue to meet the demands of our global customer base.

About Lehigh Technologies

Lehigh Technologies is a leading specialty chemicals company that produces high-performance micronized rubber powders (MRP), a sustainable raw material that reduces costs by up to 50%. Lehigh's cryogenic turbo mill technology converts end-of-life rubber into MRP used in a wide range of markets. With a state-of-the-art applications and development center, Lehigh technical experts collaborate with customers to optimize products for each application. Customers include more than 60 leading tire, asphalt and plastics companies around the world. To learn more, visit lehightechnologies.com.
